Previous Color Marking Colored disc

PJ 74 Volume Control Improved Color Coding

onion is pleased to announce that we have improved the color marking process for our PJ 74 Volume Control.

The new type of color coding was introduced in the first quarter of 1999.

The change is part of our continuous improvement philosophy at Sonion. The changes will not affect part numbers, so specific requests are not required.

Compared to the previous type of color coding, the new type has the following features:

- Better resistance to various types of cleaning solvents
- Improved adhesion better protection from mechanical stress
- Same wide color range available
